So visit and walk out as a better looking confident being.

Time to inspire Awe!

Body Contouring

Where diets and exercise are unable to achieve the desired results, either because of loose skin or stubborn fat pockets, body contouring, through plastic surgery, might be the right solution

- VASER Liposuction
- Abdominoplasty-Tummy Tuck
- Brachioplasty-Arm Lift
- Lower Body Lift.

Liposuction

Removes pockets of hard to loose fat from the legs, arms, abdomen, face, under the chin or almost any part of the body.

There is actual removal of cells, rather than reduction in size of the cells. Fat deposits that don't respond to exercise and diet regimes are ideal targets for liposuction.

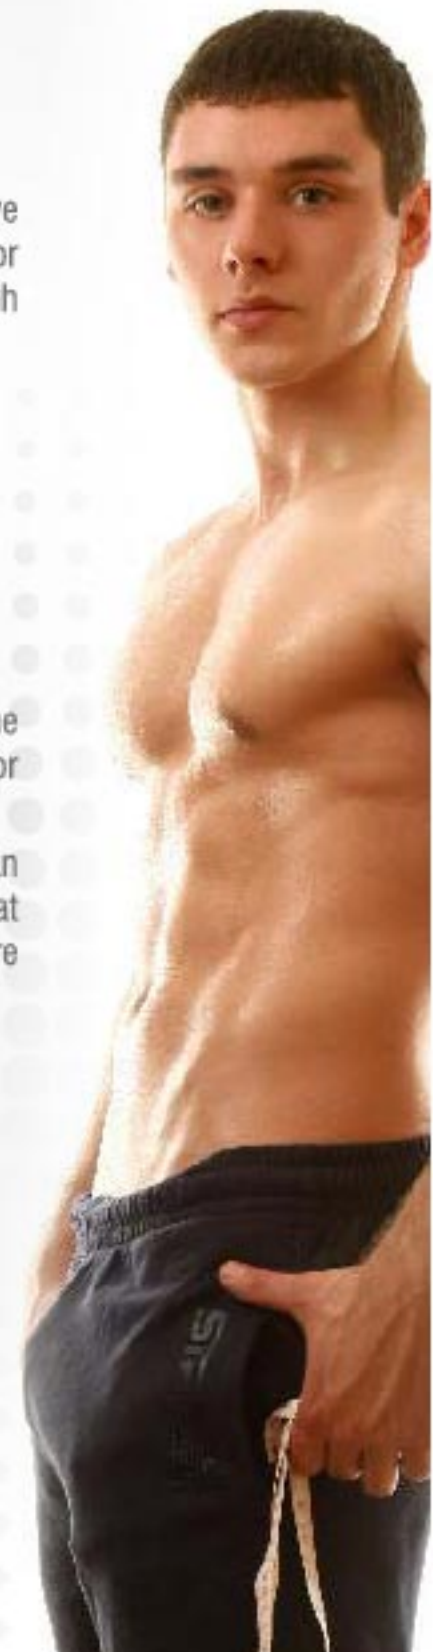

BEFORE

AFTER

Abdominoplasty (tummy Tuck)

Abdominoplasty or Tummy Tuck is a procedure designed to remove excess skin and excess fat and tighten muscles from middle and lower abdomen

Rhinoplasty/ Face Surgery

Aesthetic face surgery can allow you to achieve facial harmony and restore confidence in your appearance.

- Face Lift
- Rhinoplasty
- Direct Hair Transplant

Breast Lift

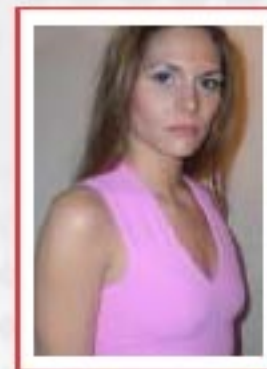

A Breast lift or mastopexy is a procedure that surgically lifts and reshapes the breast.

While Breast augmentation leads to enhanced self image, breast reduction and lifts lead to relief of symptoms of back and shoulder pain, improvement of posture and comfort.

- Lift
- Augmentation
- Reduction

BREAST LIFT

BEFORE

AFTER

Brachyplasty Arm Lift

Tightens loose skin in the upper arms by direct excision.

Lower Body Lift

Surgical removal of excess fat and skin from the abdominal wall, upper thighs and buttocks lifting the entire lower body in the process.

Laser Treatments

The Continuing evolutions of medical lasers, over past few years has provided a means of skin rejuvenation, removing skin blemishes, pigments and wrinkles, vien treatments, permanently reducing unwanted hair, acne and scar treatments, as well as treatment for multiple other skin problems. The new laser achieve this with little or no down time or redness, now available for all skin types.

Non Surgical Treatments

Aesthetic enhancement of the face and body may often be achieved through non-surgical or minimally invasive means. The results may be short term or long term depending on the means chosen .
